IMPORTANT NOTIFICATION

International application No.

International filing date (day/month/year)

Priority date (day/months/year)

PCT/KR2003/001411

16 JULY 2003 (16.07.2003)

16 JULY 2002 (16.07.2002)

Applicant

ELECTRONICS AND TELECOMMUNICATIONS RESEARCH INSTITUTE et al

- 1. The applicant is hereby notified that International Preliminary Examining Authority transmits here with the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report(but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER-

The applicant must enter the national phase before each elected office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details in the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

Reference is made to the following documents:

D1: JP 2001-16609 A2 D2: US 6249285 B1 D3: JP 1997-37301 A

The present invention relates to an apparatus and method for adapting two-dimensional and three-dimensional stereoscopic video signals for single source multi-use, characterized in that video usage environment information is managed by user characteristic information from a user terminal, and the adapted video signal is produced and sent to the user terminal. The user characteristic information includes user preference, maximum number of delayed frames, display device information, 3D video decoder information, and rendering method.

D1 discloses a stereoscopic image generation apparatus using MPEG encoded data, in which the apparatus generates a mixed picture corresponding to the current picture using the previous pictures and motion type.

D2 discloses that a method for representing an estimate of a single 3D visual scene derived from multiple 2D images of the scene, characterized by the user input specifying the scene estimation information for the 3D scene structure is accepted and a modified 3D scene structure is produced according to the user input information.

D3 discloses a stereoscopic image conversion circuit using motion vectors which are multiplexed in 2-dimensional image signal according to the MPEG algorithm.

Since the documents D1-D3 disclose the methods and apparatuses for generating a stereoscopic image for MPEG encoded data(2D) corresponding to motion type and user input information, the inventive step of the subject matter claimed in Claims 1, 10, 17, 26, 33 and 34 cannot be acknowledged. However, the detailed user characteristic information including user preference, maximum number of delayed frames, display device information, 3D video decoder information, and rendering method is not specified in the documents D1-D3. Thus, the inventive step of the subject matter claimed in Claims 2-9, 11-16, 18-25 and 27-32 and the novelty and industrial applicability of the subject matter claimed in Claims 1-34 can be acknowledged.
